

## Illuminated Surrounds

### Description

Sephra have not only endeavoured to create the highest quality, best performing chocolate fountains, we also create the highest quality, most functional accessories to compliment any of our commercial chocolate fountains. Sephra has taken time to study all of our products in order to make them the very best they can possibly be. Our illuminated surround are made from heavy-duty food grade polypropylene. Unlike cheaper alternatives this material will not crack on impact.

As well as this, polypropylene is welded instead of glued â€“ this gives your illuminated surround more strength and flexibility. Perhaps most importantly though is that this is a food grade material, unlike the most common alternative â€“ perspex. It is simple variations like these that set Sephra illuminated surrounds apart from our competitors.

Our surrounds all use a colour changing light emitting diode (LED) system. These can be remote controlled giving you the ability to change colour shade, speed and pattern depending on the event.

Sephra illuminated surrounds include soft carry cases made from heavy weight fabric with reinforced corners. These make your illuminated surround easier to carry, with added protection when in storage or transit, as well as creating a professional appearance.

Although the cases are included with our surrounds, they are also available to buy separately.
