

Theatrical Popcorn Staging Cabinet

Description

Make your Popcorn come to life with Sephraâ€™s Theatrical Popcorn Staging Cabinet!

Make your Popcorn come to life with Sephraâ€™s (Patent Protected) [Theatrical Popcorn Staging Cabinet](#)!

The 750mm wide drop in [Commercial Staging Cabinet](#) is designed for front counter use. The cabinet uses a forced air crisping system, which will retain the taste and texture. It will enable you to showcase your product underneath bright LED lights whilst being easily accessible from the rear by service staff. With a stainless steel frame this unit is extremely sturdy and easy to clean.

The Healthy Benefits

Recent studies have shed light on the multiple health benefits of this delicious snack. Whole grains, fibre and antioxidants are wrapped up in this simple snack. Be careful though. Smothering this naturally healthy snack in salt, fat, sugar and flavorings turns natural goodness into junk food.

Whole Grains

Ever since the U.S. Department of Agriculture published the 2005 Dietary Guidelines to include more whole grains, Whole grains are just that—the “whole” grain, which includes three parts: the germ, the bran and the endosperm. The germ contains healthy oils, vitamin E, protein, many B vitamins and minerals. The bran houses most of the fibre found in whole grains, as well as B vitamins, minerals, protein and antioxidants. The endosperm is primarily composed of starch with some protein and some fibre. Popcorn is naturally a whole grain and therefore provides the healthy benefits derived from the nutrients in every component of the whole grain. A survey conducted by the National Health and Nutrition Examination Survey reported that popcorn eaters consumed an average of 250 percent more whole grains than non-popcorn eaters.

Fibre

Dietary fibre is a major benefit of whole grains. Popcorn provides about 4 grams of dietary fibre for every 4 cups of popped corn. Most Americans only consume half of their recommended daily intake of fibre, which is 25 grams for women and 38 grams for men. An adequate fibre intake not helps you to stay regular but may also lower your risk of cardiovascular disease, reduce blood cholesterol and lower your risk of type 2 diabetes by regulating blood sugar.

Polyphenols

The University of Scranton reported a study in 2012 that found the antioxidant concentration to be much higher than anticipated. In fact, the study found the concentration of polyphenols surpassed that of most fruit. This nutrient was found within the hull and so popcorn without the hull may not contain this healthy antioxidant. According to the American Journal of Clinical Nutrition, polyphenols possess numerous health benefits, including the prevention of degenerative diseases such osteoporosis, cardiovascular disease, cancer, neurodegenerative diseases and diabetes.
